A MEMBER OF THE MINNESOTA STATE COLLEGES AND UNIVERSITIES SYSTEM

Message from the President

On September 24th, I spent 19 hours of my 60th birthday in airplanes traveling to Quzhou, China, the Sister City of Red Wing. Tagging along with me on this exciting visit to Quzhou was a six-person academic team from Southeast Technical whose mission was to investigate opportunities for culture and technology exchange potential with the Quzhou College of Technology and Quzhou High School #2. During our 8 day visit we also were honored to be special guests for the 2563rd birthday celebration of Confucius; Quzhou is considered his home.

As Southeast Technical strives to provide a broad experience in technical and vocational education for our students, one area that needs to expand is preparing our graduates to deal with a global workforce and the dynamics that this type of competition brings with it. Many of the businesses our graduates will work for in the future are growing across world markets and desire to have new hires understand how those markets impact their business in the United States. I feel the strong relationship, initially developed 18 years ago through the Red Wing - Quzhou Sister City program, will be a great platform for Southeast Technical developing a variety of exchange programs involving faculty, students and staff. As you read the story of our visit to Quzhou, you will also learn about the special connection with Quzhou farmers and the World War II pilots of the Doolittle raid on Tokyo.

As you page through the "Connections" you will be exposed to a variety of people and services that make Southeast Technical a successful organization through their passion, purpose, and focus. The highlighted staff, faculty, students, alumni, business partners and foundation members are the key to why our mission of workforce education is thriving.

One of the exciting developments we are proud of is the opening of our new 25,000 square foot addition which will house our flourishing automotive and auto body collision technology programs. This state of the art addition will also allow us to vacate the former Winona Airport Campus and bring the remaining three programs from that facility to the Winona Campus on Homer road. The sale of the Airport Campus was the catalyst allowing us to repurpose our current facilities by building this dynamic addition with no additional state dollars.

Through the good work of the Minnesota State College-Southeast Technical Foundation, Southeast Technical is poised to respond to student concerns related to affordability and access. As state funding has decreased by nearly half in the last 8 years, student debt has risen. At the same time, we have doubled in size. The dynamic change in state support has made it more critical to develop alternative sources of revenue help for our students and operation of college programs. Despite these challenges, the Southeast Technical Foundation has been a critical player in helping students with over \$120,000 annually in scholarships over the last few years. These efforts will continue to make Southeast Technical an affordable yet quality option for those interested in the training necessary to join the global workforce for years to come.

Please enjoy the 2012 *Connections Magazine* and the stories we are excited to tell.

College President James Johnson presents a gift to William Pan, Principal of the No. 2 High School with the help of Tao Peng, Interpreter/IT Specialist at Southeast Technical.

Global Training in Technical Education

In September, President James Johnson lead a group of Minnesota State College – Southeast Technical representatives to Red Wing Sister City – Quzhou, China – to strengthen our ties for potential teacher and student exchange between Southeast Technical and Quzhou College of Technology. “We, as a college, deal in training people for a global workforce. We strive to put forth well rounded students with good skills who understand that dealing with other cultures is part of being a global citizen.” President Johnson went on to say, “The ability to have experiences to understand another culture is valuable not only in values learned, but also in technology.” Many of the programs offered at Quzhou College of Technology are similar to the pro-

grams we offer here at Southeast Technical, including electronics, sciences, automotive and nursing, just to name a few.

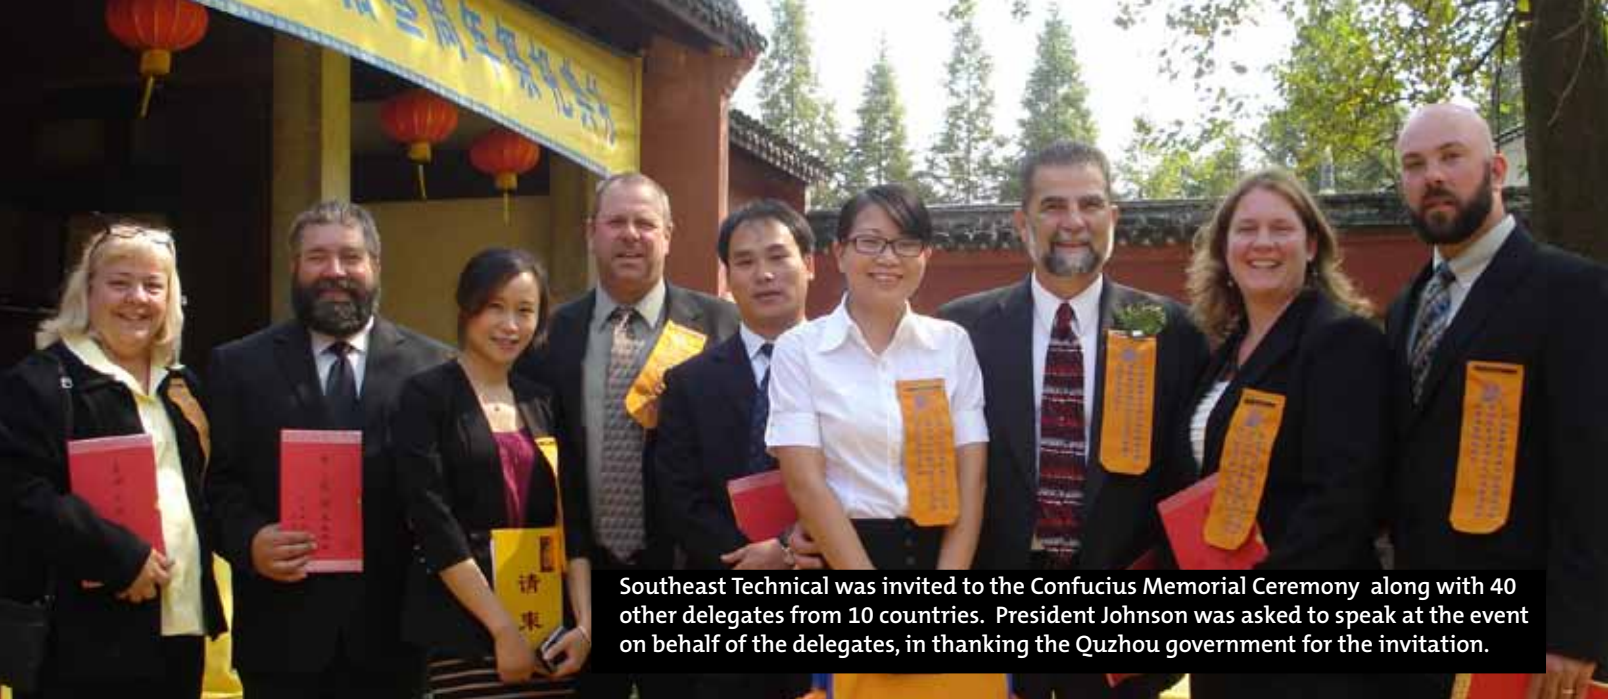

The Southeast Technical representatives spent a great deal of time with students and faculty at the College, asking questions about their programs and culture and answering questions about ours. Jo Poncelet, Dean of Liberal Arts and Sciences, recalls how willing the students were to share everything from culture to knowledge and more, saying “I think this relationship could be a true give and take benefiting students and faculty at both schools.”

Southeast Technical President Johnson and Quzhou College of Technology Vice-Principal Wu Jian signed an agreement of understanding to start exploring student and faculty exchanges between the two colleges. In addition there are intentions to begin online language and culture trainings in which students would learn from faculty in the other country. This will allow for a greater number of students and faculty to reap the benefits of this cultural exchange.

Though the primary purpose for this visit was to talk about education and the prospect for exchange, it also included cultural experiences, shared history and honoring of Confucius.

A graphic design class at the Quzhou College of Technology.

Southeast Technical was invited to the Confucius Memorial Ceremony along with 40 other delegates from 10 countries. President Johnson was asked to speak at the event on behalf of the delegates, in thanking the Quzhou government for the invitation.

A FRIENDSHIP AND SHARED HISTORY

During WWII, the Chinese military assisted in the first ever U.S. mission to bomb Japan by opening their military base in Quzhou to U.S. pilots during the Doolittle Raids on Tokyo. Chinese farmers and villagers repeatedly saved and hid the airmen who crash landed in the mountains near Quzhou. These local residents kept the servicemen safe, even hiding them in a cave on the base, until they could return home. In the mid-nineties Red Wing hosted a reunion for the Doolittle pilots. This reunion not only included the U.S. pilots but also some of the residents from Quzhou who were instrumental in protecting the pilots. The airmen and residents saw each other for the first time in about 50 years. After this emotional reunion, Red Wing established Quzhou, China as a Sister City in recognition of this connection. During the trip to Quzhou, the Southeast Technical group visited this historical base and cave.

Visiting the military base and cave where Chinese farmers and villagers hid U.S. Pilots during WWII in an effort to keep the servicemen safe.

CULTURAL EXCHANGES

The Southeast Technical group, along with delegations from Confucius Institutes around the world, were invited to join in the Ceremony for the 2,563rd Anniversary of the birth of Confucius. At the ceremony, President Johnson was asked to speak on behalf of all the ambassadors in attendance. In addition, President Johnson and Nate Emerson, Vice President of Student Affairs, presented a flower basket on behalf of Southeast Technical during the Confucius Memorial Ceremony, an honor which only a few received.

Doolittle and some of the raiders grouped outside the cave c. 1942. www.doolittleraider.com

The cultural exchange went beyond formal ceremonies. While on campus at the No. 2 High School, the delegates visited several classrooms. "I told them about snow and they told me about the Autumn Moon Festival that weekend," remembers Becky Alsop, Associate Dean of Academics, adding, "one student even gave me her moon cake."

Tao Peng, who is not only a staff member of the college, but also chair of the Red Wing Sister Cities Commission, was born in China and left when he was 13 years old. Peng said, "To see China through the eyes of this delegation was priceless; I know how they felt before they left for China and I know how they felt when they were in China. This gave me a better understanding of my own culture.

"Confucius once said, "I hear and I forget. I see and I remember. I do and I understand." This not only mirrors the philosophy of the college but also sums up the cultural experience of this trip.

College President Jim Johnson signs the agreement of understanding along side Quzhou College of Technology Vice President Wu Jian.

Meet Our Admissions and Recruitment Staff

New to Southeast Technical

Meet Shannon Schell - Director of Recruitment

As the Director of Recruitment, Shannon will lead and direct the enrollment management process by developing and implementing recruitment plans and strategies for the two campuses of Winona and Red Wing.

Shannon is a graduate of Saint Mary's University where she received her B.A. in Marketing. She has spent the last 4 years at Rochester Community and Technical College serving as their Outreach Coordinator/Admissions Representative. Previous to RCTC Shannon was at the Winona Area Chamber of Commerce as the Membership Services Coordinator for 5 years.

Our Students

Winona profile: Joe Loken

Joe Loken, 22
Hometown: Dakota, MN

Describe yourself in a few words or phrases.

Easy Going, Sociable,
Hard-Worker

What are you studying at Southeast Technical and why did you choose this program?

Retail Sales and Management. I am also involved with DECA and Student Senate and I am employed as a work study in the Maintenance Department. I'm hoping being involved and volunteering for events at Southeast Tech will help me land a career when I'm finished.

Why did you choose Southeast Technical?

Smaller college, good commute, and good learning environment.

What has been your favorite class at Southeast Technical and why?

Terry Greene's classes for Retail Sales and Management are all great classes. We talk about what is new in marketing and sales in the real world and use it in class, so it makes for good conversations and interesting topics.

What is your favorite study spot on campus?

This year I am in student senate, so I use the office. Last year I studied in the commons area.

What do you want to do after you finish your program at Southeast Technical?

I would like to get into the Business to Business (B2B) selling field.

What is your advice to a student thinking about attending Southeast Technical?

If you like a smaller community, where students are always interacting and having a good time while going to school, you should think about Southeast Technical.

Red Wing Profile: Sarah Schneider

Sarah Schneider, 18
Hometown: Fort Wayne, IN

Describe yourself in a few words or phrases.

Outgoing, Kind, Funny

What are you studying at Southeast Technical and why did you choose this program?

Band Instrument Repair. I have always enjoyed learning how things work, and I wanted to combine that with my love of music.

Why did you choose Southeast Technical?

The repair shop that I went to throughout high school was also trained at Southeast Technical, so they suggested I go here to pursue my degree.

What has been your favorite class at Southeast Technical and why?

Working in the woodwind lab is my favorite. I am able to work quietly and work without interruption.

What is your favorite study spot on campus?

The commons. There is always someone to help you with a problem.

What do you want to do after you finish your program at Southeast Technical?

Either start working in a shop or come back to Southeast Technical and study in the Guitar Programs.

What is your advice to a student thinking about attending Southeast Technical?

Go for it. The staff and students are all nice and helpful. You can't really find an unfriendly person here.

Program News

Computer Aided Design (CAD) Drafting Technologies

**NOW OFFERED
100% ONLINE**

The CAD program at Southeast Technical College has moved online. Our online CAD drafting program is flexible enough to accommodate students' busy lifestyle, but rigorous enough to ensure they develop the skills employers demand. This program features state of the art CAD 3D Parametric Software and focuses on developing student skills for employment. CAD drafters and designers are in constant demand especially at home here in Minnesota.

Electronics Technology

The Electronics program recently received approval to offer a course on Fiber Optics for Installers. Southeast Technical is one of only two institutions in Minnesota approved by the Electronics Technicians Association (ETA) to offer this training. The course will be taught by Instructor Mike Wadewitz, who is certified to teach and administer the ETA certification exam. Continuing advances in electronics has

enabled the sweeping technological changes we see all around us. Electronics

Technology at Southeast Tech provides a broad spectrum of career opportunities. Earn your degree, diploma or A.A.S.

Heating, Ventilating, Air Conditioning and Refrigeration

The United States Department of Labor is predicting a growth of 35 percent in HVAC/R mechanic and installer jobs between 2010 and 2020; in the state of Minnesota that number is even higher, nearly 40 percent. This predicted growth is more than double that of the average for all other occupations. The demand for qualified HVAC/R technicians has exceeded the graduating student levels, with a projected estimated shortage of 80,000 technicians across the United States making this the perfect time to enter the HVAC/R program at Southeast Technical. Our curriculum provides a balance of theory and application which will give students a solid foundation of the essentials involved in HVAC/R.

Nursing

Southeast Technical is responding to the region's nursing shortage with new degree options and the program is more hands on than ever before. Clinical and lab experiences provide simulated scenarios and direct patient care encounters for students and multiple clinical sites allow students to explore different fields within nursing before graduation. The U.S. Bureau of Labor Statistics is predicting the job outlook for nurses will increase between 22 and 26 percent before 2020. Now is a good time to get started in a career in nursing.

Medical Coding

Beginning spring semester we will see a new four credit course added to the program, MEDS1630 ICD-10-CM/CPS.

ICD-10 is the new version of the International Classification of Diseases code. Nationally we have been using ICD-9 for over 30 years and October 1, 2014 the switch to ICD-10 will allow for more detail with seven alphanumeric characters instead of five in the ICD-9 code set. To demonstrate the scope of this change, the system will go from about 17,000 characters in ICD-9 to approximately 140,000 with ICD-10. This training will be beneficial to current students as they prepare for their future in Medical Coding.

Computerized (CNC) Precision Machining Technology

The precision skills of the tool and die maker are as important as ever in our manufacturing and service processes. The CNC program at Southeast Technical focuses on keeping up with the technology used in industry. The coursework in this program is 70 percent hands-on, giving students

**EMPLOYMENT
OPPORTUNITIES
ARE ABUNDANT!**

real experience to prepare for their career. Employment opportunities in this field are abundant locally as well as regionally. According to the Minnesota Department of Employment and Economic Development, careers in CNC in the state of Minnesota will increase as much as 30 percent between 2010 and 2020.

State of the Art Transportation Center Nearly Complete

The 25,000 square foot addition to the truck driving training building will be at full occupancy January of 2013. The building will house, in addition to the Truck Driving program, the Auto Body Collision Technology and Automotive Technology programs.

“The new facility is a chance to rethink everything we teach and how we teach it,” says Auto Body Collision Technology Instructor Tom Brandt. “We are excited for the chance to organize the shop in a manner that best matches the teaching units we deliver. The most impressive part of the auto body facility will be the paint department with 84 feet of frontage on the paint booths and paint mixing rooms facing the shop production area. This equipment is set-up to spray water based paints as well as the current technology: solvent based products.”

Space on the Winona main campus that was once occupied by the two Automotive programs will be occupied by the Computerized (CNC) Precision Machining Technology, Industrial Technology and Welding Technology programs, which have been renting space at the former airport campus now owned by Plasticomp.

Look for a grand opening of the new addition and a celebration of the technology and manufacturing programs spring of 2013.

A look inside the Automotive Technology addition.

Continuing Education and Workforce Training

Southeast Technical Responds to Statewide Workforce Assessments Essential skills top priority with today's workers

Southeast Technical's Business Relations Directors attended numerous meetings across Southeastern Minnesota focused on addressing the growing skill gaps for Minnesota workers. Employers from various industries spoke on the projected need for workers and professionals and what skills they should possess.

The need for essential (soft) skills was consistent across all industries, some thought even more important than the technical skills. "Employers are looking for people with good leadership and communication skills," said Jen Olson, Director of Business Relations. "They are willing to provide resources to develop customer service and a true team mentality within their companies."

As a result, Southeast Technical has responded by offering a long list of Essential Skills classes that can be customized to fit each customer's unique needs:

- Behavior Based Interviewing
- Diversity in the Workplace
- Performance Management
- Time Management
- Change Management
- Performance Coaching
- Sexual Harassment Awareness
- Team Building
- Communication Skills
- Basic Problem Solving
- Leadership Development

Scholarship Gives Sense of Vocation and Desire to Achieve

When Terri Vagasky decided it was time for a career change in 2009, the choice to attend Southeast Technical was easy. A longtime Red Wing resident who volunteered in her daughters' classrooms and Girl Scouts' troops, she knew instructors and staff from the community and had heard good things through the grapevine about the college's nursing program. Aside from being a personally rewarding career path, nursing, Terri recognized, would offer the

stable working hours and benefits her family was looking for as the economy declined.

When it came to financing her education, Terri was excited to learn that the Southeast Technical Foundation offered scholarships. She has applied for and earned a scholarship every semester that she has attended Southeast Technical. Having those extra funds has made a big impact on her family's budget. "I was always awarded enough to cover the costs of books, and as a nursing student, that made a big difference," Terri says.

As a scholarship recipient, Terri feels a stronger sense of vocation and desire to achieve her educational goals. "Receiving a scholarship makes me feel like I have a partner in my education. It's given me a sense that my accomplishments are not just mine. There are people rooting for me."

Ah's Award Winning Style

Setting Trends

Cosmetology Graduate Ah Vang is not only keeping up with trends, she's setting them.

Keeping up with trends is part of the job for Minnesota State College – Southeast Technical alumna, Ah Vang. As a stylist at Fantastic Sam's she worked hard to build up her clientele. Keeping up with trends is what keeps her regulars coming back.

Not only is Ah keeping up with trends, she is setting them. She was honored with a national award in September 2012. Ah was one of three finalists in the Male Cut and Style category nationwide to win a trip to Las Vegas for the finals. In addition to being honored with this award, she was honored with being one of the first Minnesotans to go to the finals, ever.

Vang's favorite part of her job is meeting new people. "You never know who'll walk in from day to day. If someone is having a bad day, you could be the one to change it by giving them a good cut."

Hair styling is a service that takes flair. "It is an art and that's what I love about it. You take techniques and make them your own. No two stylists will cut hair the same way." Vang goes on to say, "People are wearing your sculpture every day; dramatic or simple, it's all art."

Vang graduated with an Associate in Applied Science degree in Cosmetology from Southeast Technical in May 2010. She says she really enjoyed her experience in the program. The one on one personal attention she received from her instructors made the experience invaluable, "They really focused on us as students."

Ah's advice for others interested in going into Cosmetology, "Don't cut yourself short. Put your heart into it and be willing to keep learning."

Alumni

Alumni Association Sees Graduates as Valued Members of Southeast Technical

Each year, Southeast Technical's Alumni Association recognizes alumni from each campus who have accomplished noteworthy achievements in their careers or have made significant contributions to their communities and Southeast Technical. Congratulations to the 2012 Outstanding Alumni Award recipients, Kip Earney and Jerry Kottschade.

Kip Earney -1986

A graduate of Southeast Technical's small business and retail management program, Kip Earney is owner of West End Liquor & Fine Cigars in Red Wing. Read Kip's profile at www.southeastmn.edu/Kip

Jerry Kottschade - 1968

A graduate of Southeast Technical's auto body program, Jerry is owner of Jerry's Body Shop in Mankato, MN. Read Jerry's profile at www.southeastmn.edu/Jerry.

Southeast Technical Alumni & Friends Reunions

New this year, the alumni association will be holding two Southeast Technical Alumni & Friends Reunions.

Winona: June 22, 2013 on the Winona Main Campus

Red Wing: October 12, 2013 on the Red Wing Campus

These events are also open to the public. They will be a great opportunity for our communities to learn more about Southeast Technical's programs and interact with graduates.
